

Victory Keys to Safety

"RISK MANAGEMENT"

FULL SPECTRUM OF ARMY OPERATIONS

Risk Management Is A Five Step Process Used To Identify And Control Hazards To Sustain The Force

- Consider all aspects of current and future situations.

- Determine the risks and assess the impact of each hazard based on probability and severity.

- Develop control measures that eliminate the hazard or reduce its risk. Upon completion, the appropriate decision authority approves the residual risk. (see V Corps Safety SOP for appropriate decision authority).

- Implement controls that eliminate the hazards or reduce their risks. **Ensure all residual risks and controls are communicated to all involved.**

- Evaluate the effectiveness and enforce standards and controls. Ensure lessons learned are fed back into the system for future planning.

CAUTION

- Risk Management must be integrated into all facets of Army Operations.

- Commanders and Leaders at all levels must support the risk management process and encourage their subordinates to do the same.

- Remember, **SAFETY is EVERYONE'S RESPONSIBILITY!**
